EXPERIENCE

AllHeart Web Pvt Ltd **October 2024 - Present**

MERN STACK DEVELOPER

- Designing and building scalable full-stack applications using **MongoDB, Express.js, React, and Node.js**.
- **Building robust REST APIs and integrating MongoDB for efficient data handling.**
- Creating responsive and user-friendly interfaces using **React and Tailwind CSS**.

Key Projects:

Centralized Authentication Platform (Company-wide SSO System)

- Designed a centralized authentication platform enabling company-wide **Single Sign-On (SSO)** across multiple applications.
- Implemented secure authentication flows using JWT **access tokens** and role-based access control (**RBAC**).
- Developed high-performance authentication APIs using **Node.js**, **Express**, and **MongoDB** for user identity, session management, and token validation.
- Strengthened platform security with **rate limiting**, **password hashing**

MarketXY – Domain Discovery Platform Live

- Built a domain discovery platform indexing **250M+ domains** with **Elasticsearch**-powered search for fast exploration of large-scale datasets.
- Developed the full-stack application using **Next.js** and **Node.js** with scalable APIs for domain categorization, filtering, and retrieval.
- Designed and developed an **admin analytics dashboard with an integrated CMS**, enabling administrators to monitor key insights (,most viewed domains, category performance) while dynamically managing domain categories and **controlling their visibility** on the platform.
- Developed a **client dashboard** where users can access data based on their subscription plans.
- Built **secure download mechanisms** with usage tracking to prevent overuse.

PROJECTS

MyAuth | Next.js | Node.js | MongoDB | OAuth 2.0 | Docker | Redis | RabbitMQ Github Live

Designed and implemented a **production-ready Auth-as-a-Service platform** with a centralized **Admin Dashboard** for managing applications, users, and authentication flows.

- Designed and developed a production-ready authentication platform enabling developers to add secure authentication to **multiple applications** through a **centralized admin dashboard**.
- Implemented **per-application `client_id` and `client_secret` credentials** to securely authenticate client applications integrating with the MyAuth platform.
- Developed a hosted authentication portal providing **reusable Sign-Up and Sign-In flows** across multiple client applications.
- Implemented **force logout and logout-from-all-devices** functionality by revoking all active sessions for a user or application.
- Used **Redis** for **rate limiting, token revocation, session caching.**
- Integrated **RabbitMQ for event-driven user lifecycle management**, publishing **user.created** and **user.updated** events to decouple authentication from downstream systems.
- Built a **developer-friendly Next.js SDK (`@myauth/next`)** with server helpers, middleware, and hooks to simplify authentication integration in **Next.js App Router applications**.
- Containerized services using **Docker** to support consistent deployment .

AI Notification System | Next.js | Node.js | MongoDB | RabbitMQ | OpenAI | gRPC | Docker [Github]

Designed and implemented a **production-ready, multi-tenant AI-powered notification platform** supporting **Email, SMS, WhatsApp** from a unified API.

- Built a **scalable microservices architecture** with API Gateway, Auth Service, Management Service, Template Service, Notification Service, and Channel-specific delivery workers.
- Built the system as a **monorepo using Turborepo**, enabling shared packages, faster builds.
- Designed and exposed a **RESTful API (`/api/v1/notifications/send`)** to trigger multi-channel notifications (Email, SMS, WhatsApp) through a single unified endpoint.
- Implemented **API key-based authentication system** for secure access, including key generation, hashing, and validation on every request
- Used **RabbitMQ as the event-driven messaging backbone** to trace notification events, decouple producers and consumers, and enable asynchronous processing.
- Leveraged **gRPC for high-performance, low-latency communication** between internal microservices.
- Implemented **event-based message tracking** with delivery states (queued, sent, delivered, failed)
- Developed a **centralized dashboard** for managing notifications across multiple channels (Email, SMS, WhatsApp) with real-time visibility.
- Designed **multi-tenant UI architecture**, enabling isolated views for different users.

ACHIEVEMENTS

Launched Git Issue Hunt, a platform helping developers find beginner-friendly open-source issues, on Product Hunt – garnered 11 upvotes and attracted early active users.

EDUCATION

Maharishi Markandeshwar University — **Mullana , India**
Bachelor of Technology, Computer Science **|** CGPA: 8.69 — **2020-2024**

TECHNICAL SKILLS

Frameworks, Tools, and Technologies: React.js, Node.js, Express.js, MongoDB, Elasticsearch**,** Next.js, Git, GitHub, Docker , RabbitMQ, Tailwind, gRPC, RabbitMQ
Programming Languages: JavaScript,TypeScript
